

# Homework Project 4

Due 12/9

This project requires you to complete an existing Swing GUI program included in the zip file. It demonstrates the use of JList and JButton.

## Goal

The program is a simple menu or inventory program which allows the user to select one or more items from a list. The selected items can be saved to a CSV file by clicking the Save button.

Most of the program is complete, except for the Save Button Action, which saves the selected item information to a CSV file.

Review the code included in the zip file and complete the **SaveAction** class.
